Ring Size Converter

This handy tool (on the next page) shows the various ring sizing systems used in different countries. These scales are not to size—instead, they graphically show the equivalent systems.

1. Wrap a piece of string or paper loosely around your finger.
2. Unwrap and measure the length in millimeters.
3. Find the measured length on the chart (see the next page) and lay a straight edge across to determine the size in the first three systems.
4. For the system we use in the Netherlands, divide this number by 3.142 (π).

Example on next page (the red line)

My paper strip measures 57mm. This is equivalent to a size 8 in the U.S., 16.5 in Japan, between a P and Q in the UK, and 57.5 in France. The inner diameter of this ring will be 18.25mm.

Circumference (in mm)	USA Canada	Japan	UK Australia	FR	NL O Diameter (in mm)
